

T40FM

Torque flange

Characteristic features

- Nominal (rated) torque: 15 kN·m, 20 kN·m, 25 kN·m, 30 kN·m, 40 kN·m, 50 kN·m, 60 kN·m, 70 kN·m and 80 kN·m
- Nominal (rated) speed up to 8000 rpm
- Compact design
- High permissible lateral forces
- High radial and torsional stiffness
- Without bearings or slirings
- Digital transmission of measured values
- Large measurement frequency range up to 6 kHz (-3 dB)
- Optional: Magnetic speed measuring system

Overall concept

Specifications

Type	T40FM																		
Accuracy class	0.1																		
Nominal (rated) torque M_{nom}	kN·m	15	20	25	30	40	50	60	70	80									
Nominal (rated) speed optional	rpm rpm	6000 8000			4000 6000			3000 4500											
Torque measuring system, frequency output																			
Nominal (rated) sensitivity (nominal (rated) signal range between torque = zero and nominal (rated) torque) Option SU2 Option DU2 Option HU2	kHz kHz kHz	10 60 240																	
Sensitivity tolerance (deviation of the actual output frequency at M_{nom} from the nominal (rated) sensitivity)	%	± 0.2																	
Linearity deviation including hysteresis, relative to the nominal (rated) sensitivity	%	$< \pm 0.1$ (optional $< \pm 0.05$)																	
Relative standard deviation of repeatability (variability), per DIN 1319, related to the variation of the output signal	%	$< \pm 0.05$																	
Load resistance	kΩ	>2																	
Output signal at torque zero Option SU2 Option DU2 Option HU2	kHz kHz kHz	10 60 240																	
Nominal output signal (RS422, 5 V symmetrical) At positive nominal (rated) torque, Option SU2 At positive nominal (rated) torque, Option DU2 At positive nominal (rated) torque, Option HU2 At negative nominal (rated) torque, Option SU2 At negative nominal (rated) torque, Option DU2 At negative nominal (rated) torque, Option HU2	kHz kHz kHz kHz kHz kHz	15 90 360 5 30 120																	
Maximum control range ¹⁾ Option SU2 Option DU2 Option HU2	kHz kHz kHz	2.5 ... 17.5 15 ... 105 60 ... 420																	
Maximum bandwidth (-3 dB) Option SU2 Option DU2 Option HU2	kHz kHz kHz	1 3 6																	
Group delay Option SU2 Option DU2 Option HU2	μs μs μs	<400 <220 <150																	
Temperature effect per 10 K in the nominal (rated) temperature range on the output signal, related to the actual value of the signal spread on the zero signal, related to the nominal (rated) sensitivity	%	$< \pm 0.1$																	
Long-term drift over 48 h at reference temperature, related to nominal (rated) sensitivity	%	≤ 0.03																	

¹⁾ Output signal range in which there is a repeatable correlation between torque and output signal.

Specifications (continued)

Torque measuring system, voltage output										
Nominal (rated) sensitivity (spread between torque = zero and nominal (rated) torque)	V	10								
Sensitivity tolerance (deviation of the actual output frequency at M_{nom} from the nominal (rated) sensitivity)	%	± 0.2								
Linearity deviation including hysteresis, relative to the nominal (rated) sensitivity optional	%	$< \pm 0.1$ $< \pm 0.05$								
Relative standard deviation of repeatability (variability), per DIN 1319, related to the variation of the output signal	%	$< \pm 0.05$								
Output signal at torque zero	V	0								
Nominal output signal at positive nominal (rated) torque at negative nominal (rated) torque	V	10 -10								
Maximum control range ²⁾ Invalid measured value	V	± 12 13 ... 15								
Load resistance	kΩ	> 10								
Residual ripple ³⁾	mV	< 40 (peaktopeak)								
Temperature effect per 10 K in the nominal (rated) temperature range on the output signal, related to the actual value of the signal spread	%	$< \pm 0.2$								
on the zero signal, related to the nominal (rated) sensitivity	%	$< \pm 0.15$								
Long-term drift over 48 h at reference temperature, related to nominal (rated) sensitivity	%	≤ 0.03								
Speed measuring system										
Nominal (rated) torque M_{nom}	kN·m	15	20	25	30	40	50	60	70	80
Measurement system		Magnetic, via AMR-sensor (Anisotropic-Resistive-Effect) and magnetized plastic ring with embedded steel ring								
Magnetic poles		158								
Maximum position deviation of the poles		± 50 angular seconds								
Output signal	V	5V symmetrical (RS 422); 2 square wave signals approx. 90° phase shifted								
Pulses per revolution		1024								
Minimum rotational speed for sufficient pulse stability	min ⁻¹	0								
Pulse tolerance ⁴⁾	Degree	$< \pm 0.05$								
Maximum permissible output frequency	MHz	4								
Group delay	μs	<5								
Radial nominal distance between sensor head and magnetic ring (mechanical distance)	mm	1.6								
Working distance range between sensor head and magnetic ring ⁵⁾	mm	0.4 ... 2.5								
Max. permissible axial displacement of the rotor to the stator ⁶⁾	mm	± 1.5								
Hysteresis of reversal in the case of relative vibrations between the rotor and the stator										
Torsional vibration of the rotor	Degree	$< \text{approx. } 0.2$								
Horizontal stator vibration displacement	mm	$< \text{approx. } 0.5$								
Load resistance ⁷⁾	kΩ	? 2								

²⁾ Output signal range in which there is a repeatable correlation between torque and output signal.

³⁾ Signal frequency range 0.1 to 10 kHz.

⁴⁾ At nominal conditions.

⁵⁾ The pulse tolerance improves with reduced distance and vice versa.

⁶⁾ The data refers only to a central axial alignment. Deviations lead to a change in pulse tolerance.

⁷⁾ Note the termination resistances as per RS422.

Specifications (continued)

Application limitations													
Reference temperature	°C	+20											
Nominal (rated) temperature range	°C	+10 ... +70											
Operating temperature range ⁸⁾	°C	-20 ... +85											
Storage temperature range	°C	-40 ... +85											
Permissible ambient humidity Relative humidity / no condensation	%	5 ... 95											
Load limits ⁹⁾													
Nominal (rated) torque M_{nom}	kN·m	15	20	25	30	40	50	60	70	80			
Limit torque	kN·m	32		60			110						
Max. limit load of measuring body ¹⁰⁾	kN·m	100		200			350						
Breaking torque (static)	kN·m	>100		>200			>350						
Longitudinal limit force (static)	kN	60		120			240						
Lateral limit force (static)	kN	80		160			240						
Bending limit moment (static)	N·m	6000		12000			24000						
Oscillation width , as per DIN 50100 (peaktopeak) ¹¹⁾	kN·m	30	32	60			100						
Protection class , as per EN 60529 (rotor/stator)	-	IP 54											
Shunt													
Nominal (rated) trigger voltage	V	5											
Trigger voltage limit	V	36											
Calibration signal on	V_{min}	>2.5											
Calibration signal off	V_{max}	<0.7											
Tolerance of the shunt signal, related to M_{nom} at reference temperature	%	<± 0.05											
Energy supply													
Nominal (rated) supply voltage (separated extralow voltage)	V_{DC}	18 ... 30											
Current consumption													
In measuring mode	A	<1 (typ. 0.3 at 20 V supply voltage)											
In startup mode	A	<4 (typ. 2) for max. 50 µs											
Nominal (rated) power consumption	W	< 10 (typ. 6)											
Maximum cable length	m	50											

⁸⁾ Heat conductance via the stator base plate necessary over 70°C. The temperature of the base plate must not exceed 85°C.

⁹⁾ Each type of irregular stress (bending moment, lateral or longitudinal force, exceeding nominal (rated) torque) can only be permitted up to its specified static load limit, provided none of the others can occur at the same time. If this condition is not met, the limit values must be reduced. If 30% of the bending limit moment and lateral limit force occur at the same time, only 40% of the longitudinal limit force is permissible and the nominal (rated) torque must not be exceeded. The permissible bending moments, longitudinal forces and lateral forces can affect the measurement result by approx. 1 % of the nominal (rated) torque. The load limits only apply for the nominal (rated) temperature range. At temperatures <10°C, the load limits must be reduced by approx. 30% (viscosity reduction).

¹⁰⁾ The data refer to static loading of the measuring body; note the screw connections!

¹¹⁾ The nominal (rated) torque must not be exceeded.

Specifications (continued)

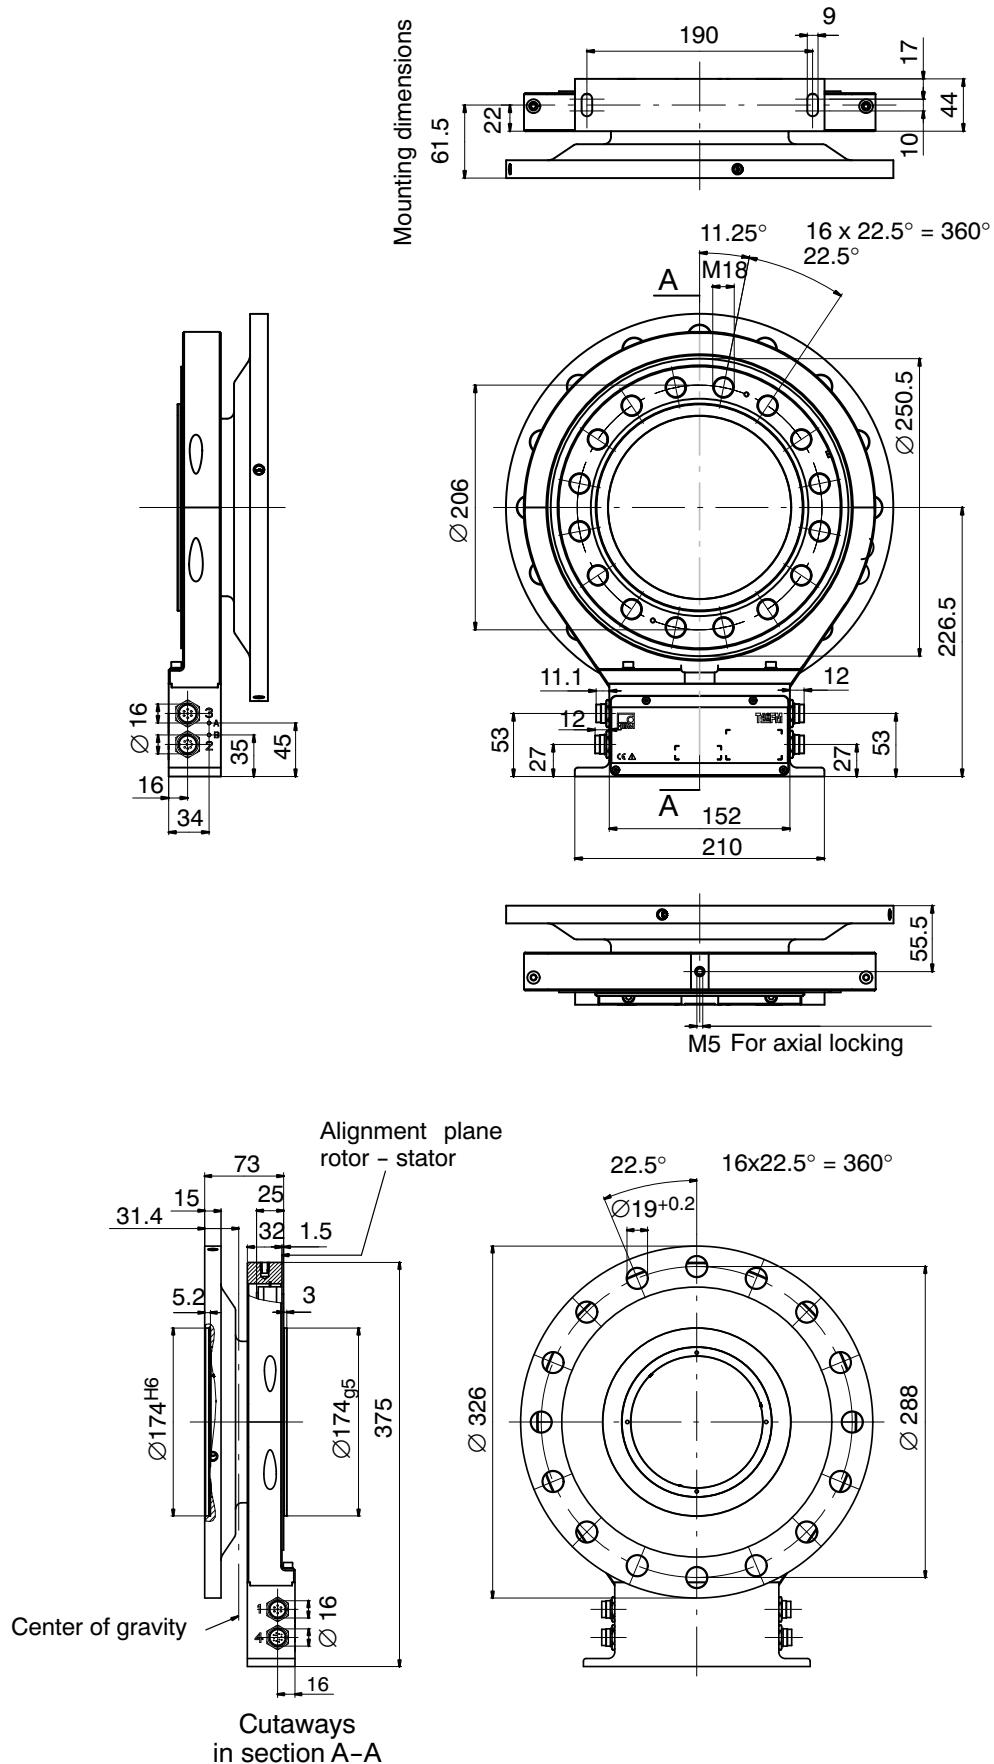

General Information														
EMC Emission , as per EN 61326-1, Section 7 RFI field strength	-	Class B												
Interference immunity , as per EN 61326-1, EN 61326-2-3	V/m	10												
Electromagnetic field (AM)	A/m	100												
Magnetic field	kV	4												
Electrostatic discharge (ESD)	kV	8												
Contact discharge	kV	1												
Air discharge	kV	1												
Rapid transients (burst)	kV	10												
Impulse voltages (surge)	kV													
Conducted interference (AM)	V													
Mechanical shock , as per EN 60068-2-72 ¹²⁾	n	1000												
Number	ms	3												
Duration	m/s ²	650												
Vibrational stress in 3 directions , as per EN 60068-2-6 ¹²⁾	Hz	10 ... 2000												
Frequency range	h	2.5												
Duration	m/s ²	200												
Mechanical data														
Nominal (rated) torque M_{nom}	kN·m	15	20	25	30	40	50	60	70	80				
Torsional stiffness c_T	kN·m/rad	32050			63260			106200						
Torsion angle at M_{nom}	Degree	0.027	0.036	0.045	0.027	0.036	0.045	0.033	0.038	0.043				
Stiffness in the axial direction c_a	kN/mm	1380			1710			2280						
Stiffness in the radial direction c_r	kN/mm	3900			5080			6170						
Stiffness during the bending moment round a radial axis c_b	kN·m/deg	94			188			290						
Maximum deflection at longitudinal force limit	mm	<0.05			<0.08			<0.12						
Additional maximum radial run-out deviation at lateral limit force	mm	<0.05			<0.05			<0.05						
Additional maximum plane/parallel deviation at bending moment limit	mm	<0.5						<0.7						
Balance quality level , as per DIN ISO 1940		G 6.3												
Permissible max. limits for relative shaft vibration (peaktopeak)¹³⁾														
Undulations in area of connection flange, based on ISO 7919-3														
Normal operation (continuous operation)	µm	$s_{(p-p)} = \frac{9000}{\sqrt{n}}$ (n in min ⁻¹)												
Start and stop operation/resonance ranges (temporary)	µm	$s_{(p-p)} = \frac{13200}{\sqrt{n}}$ (n in min ⁻¹)												
Mass moment of inertia of rotor Lv (around the rotary axis; does not take flange bolts into account)	kg·m ²	0.2			0.46			0.75						
Proportional mass moment of inertia for the transmitter side (side of the flange with external centering)	%	28			23			26						
Permissible eccentricity of the rotor (radially) to the center point of the stator	mm	± 2												
Permissible axial displacement between rotor and stator ¹⁴⁾	mm	± 2												
Weight	kg	18			28			39						
Rotor	kg	1.8			2.1			3.0						

¹²⁾ The antenna ring and connection plug must be fixed.

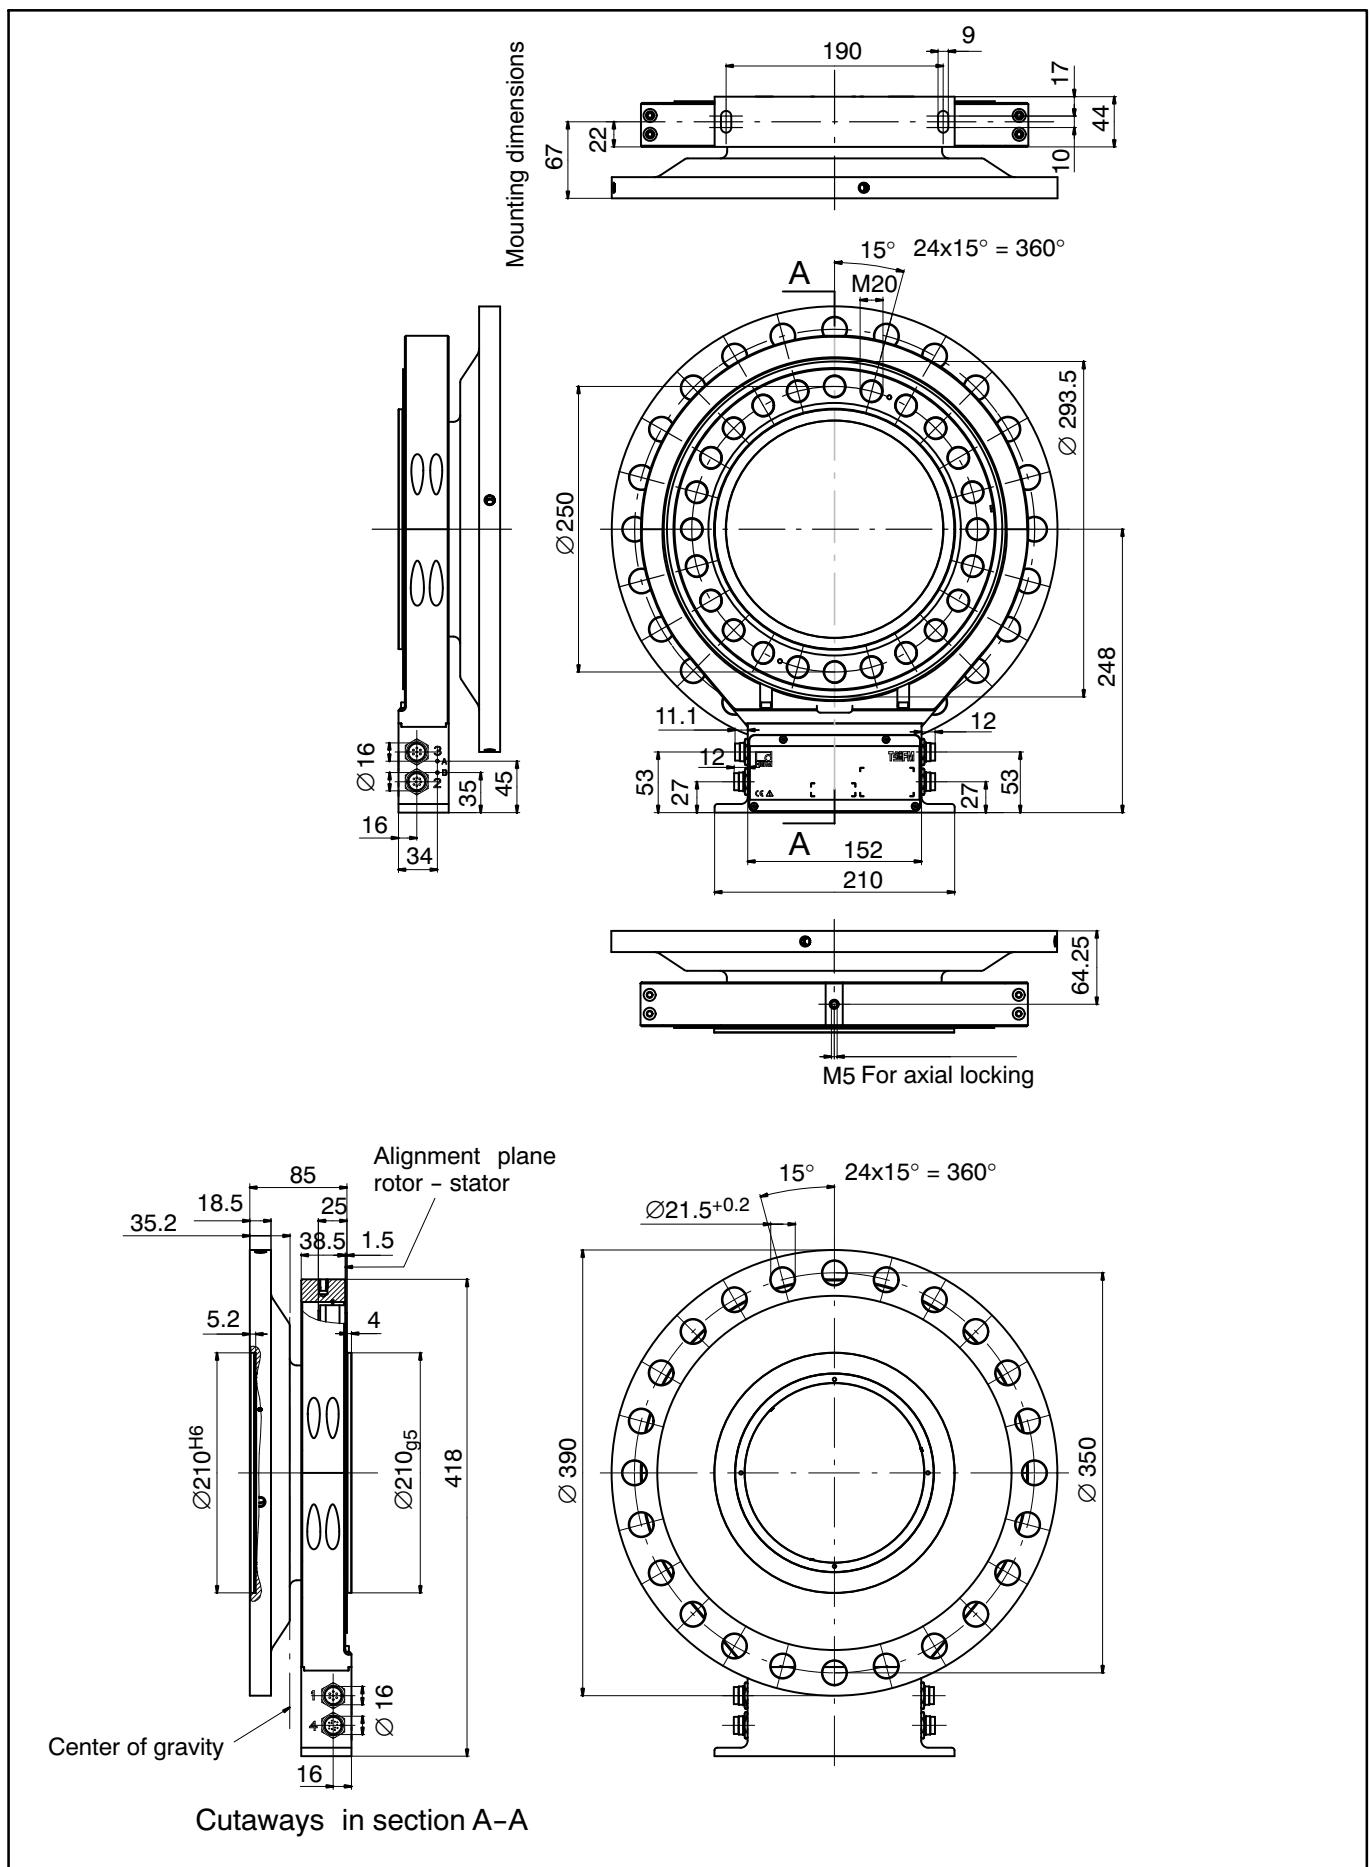

¹³⁾ The influence of radial run-out deviations, eccentricity, defects of form, notches, marks, local residual magnetism, structural variations or material anomalies needs to be taken into account and isolated from the actual wave oscillation.

¹⁴⁾ Above the nominal (rated) temperature range ±1.5 mm.
